

Elysian

from definition to live delivery

Every dashboard, every role, one event source of truth.

01

Define

Days, functions, guests, venues, and workstreams.

02

Compose

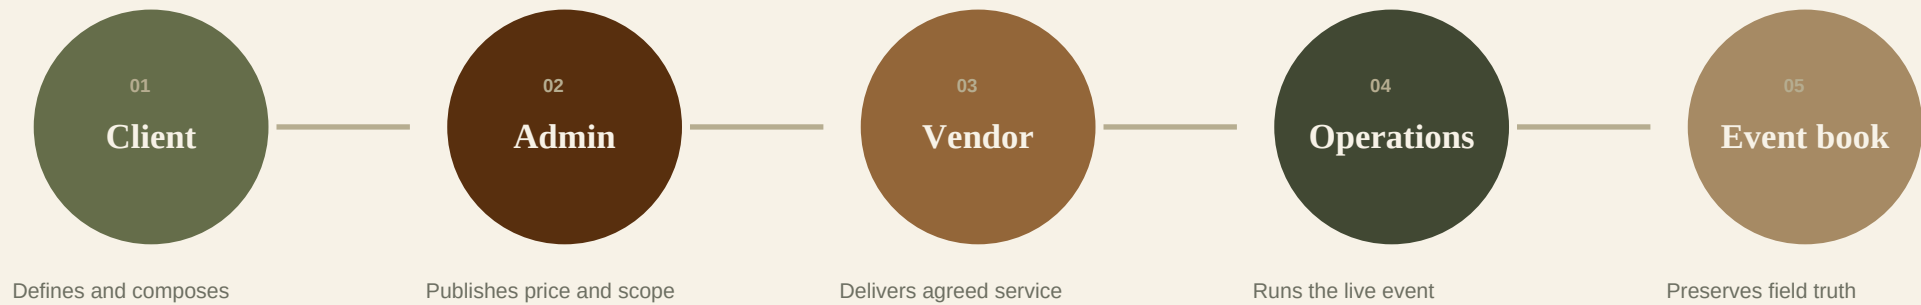

Vendors, menus, requirements, tasks, and cost.

03

Deliver

Operations, incidents, decisions, team, and print.

Elysian joins planning, commercial control, and live event delivery instead of scattering them across messages and spreadsheets.

**CLIENT IN****Full client price**

The client sees and pays the published final amount collected by Elysian.

VENDOR OUT**Private vendor payout**

The vendor sees only the agreed payout and its settlement progress.

COMMERCIAL RULE**Fixed Elysian fee**

Admin records a fee. There is no quote negotiation state inside the product.

The client moves from definition to composition, then uses supporting workspaces without leaving the event source of truth.

Dashboard	/client	Event Plan	/client/wedding
Cost Estimate	/client/budget	Vendors	/client/vendors
Guest List	/client/guests	Run of Show	/client/timeline
Mood Board	/client/mood-board	Messages	/client/messages
Bookings	/client/bookings	Billing	/client/billing
Settings	/client/settings	Onboarding	/client/onboarding

OUTCOME 1

Less typing

Venue dropdowns, event taxonomy, requirement chips, and real vendor catalogues.

OUTCOME 2

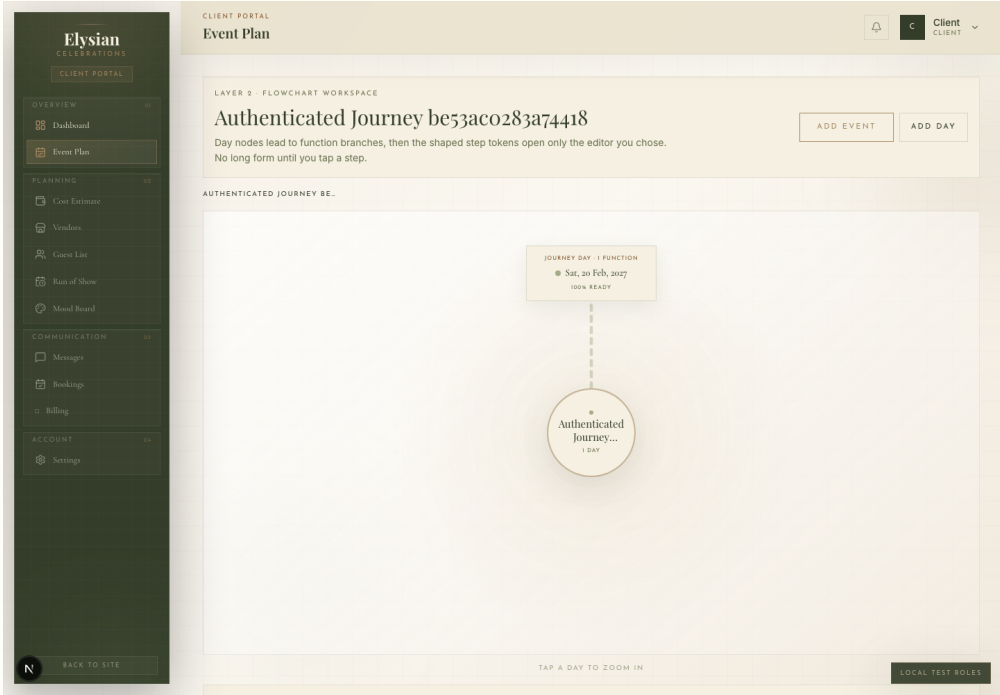

Stable structure

Days, functions, menus, tasks, bookings, and cost retain shared identifiers.

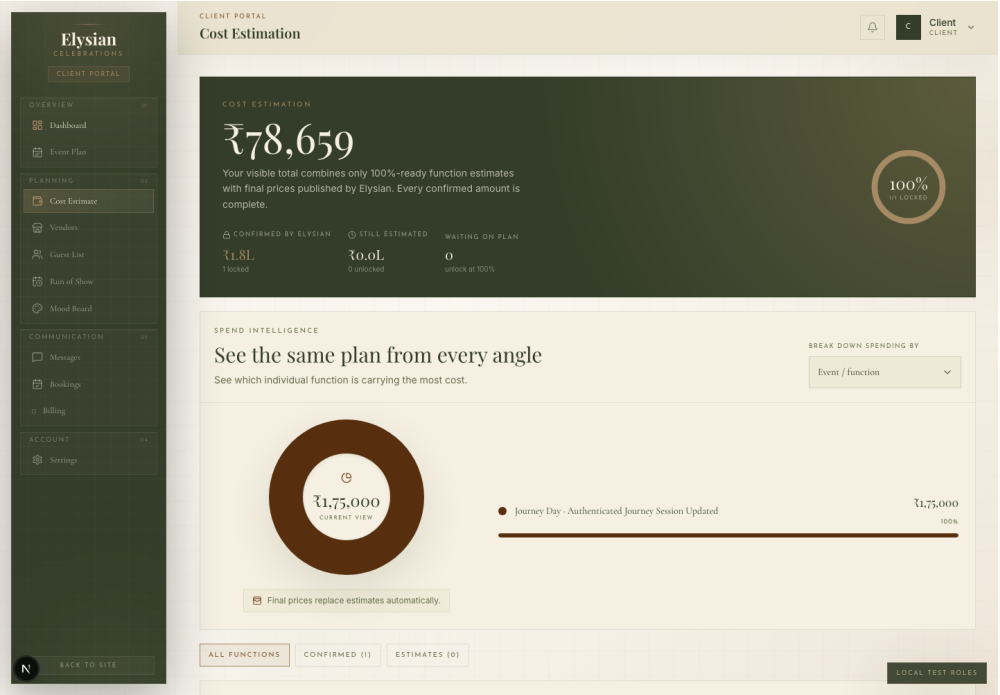

OUTCOME 3

Clear readiness

Finalization opens the exact missing function and step.

LAYER 2 RADIAL EVENT MAP

FUNCTION-AWARE COST INTELLIGENCE

AUTHENTICATED VERIFICATION EVIDENCE

These captures come from the rollback-clean authenticated fixture. The plan preserves orientation; the cost surface exposes only client-safe published and estimated values.

Vendor workspaces describe real services, catalogue rows, media, availability, bookings, communication, and agreed payout.

Dashboard	/vendor	Analytics	/vendor/analytics
Profile	/vendor/profile	Services	/vendor/services
Portfolio	/vendor/portfolio	Reviews	/vendor/reviews
Inquiries	/vendor/inquiries	Confirmed	/vendor/bookings
Calendar	/vendor/calendar	Messages	/vendor/messages
Settings	/vendor/settings	Public profile	/vendors/[slug]

OUTCOME 1

Structured offer

Scope, fit, inclusions, deliverables, add-ons, and item catalogue.

OUTCOME 2

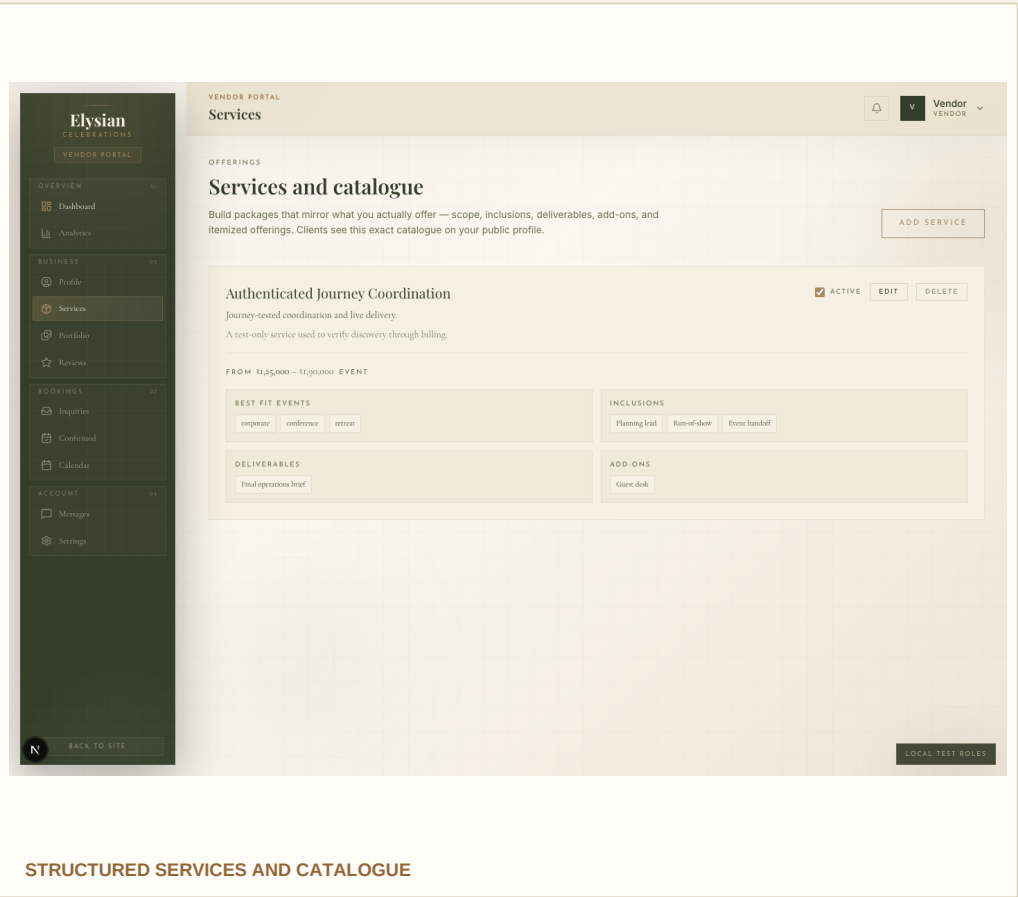

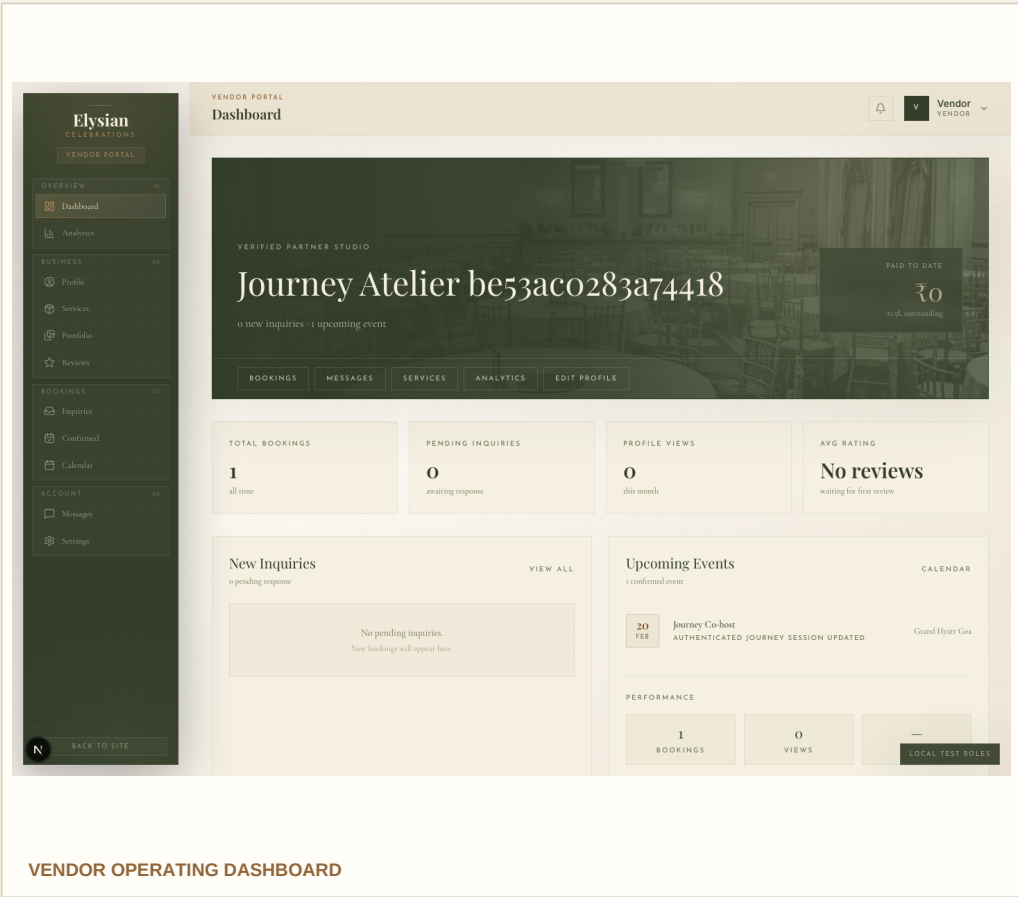

Visual proof

Portfolio and per-item media create context before selection.

OUTCOME 3

Private payout

Only agreed vendor amount and settlement progress are visible.

AUTHENTICATED VERIFICATION EVIDENCE

The vendor controls discoverability and delivery information. Client pricing and the Elysian fee never appear in this role.

Admin operates the platform-wide control plane: catalogue quality, canonical readiness, fixed pricing, billing, identity, and exact employee scope.

Dashboard	/admin	Analytics	/admin/analytics
Final Pricing	/admin/pricing	Client Billing	/admin/billing
Client Progress	/admin/progress	Revenue	/admin/revenue
Vendors	/admin/vendors	Clients	/admin/clients
Destinations	/admin/destinations	Packages	/admin/packages
Venues	/admin/venues	Blog Posts	/admin/blog
Client Stories	/admin/testimonials	Inquiries	/admin/inquiries
Users	/admin/users	Team & Permissions	/admin/team
Settings	/admin/settings	Operations data	/api/operations/*

OUTCOME 1

Commercial truth

One final client price with separate inward and outward ledgers.

OUTCOME 2

Canonical readiness

Admin sees the same plan gaps the client must resolve.

OUTCOME 3

Exact authority

Capabilities plus assignments replace one all-powerful manager role.

ADMIN

OPERATIONS CONTROL

Give every employee exactly the event access they need.

Role templates establish capabilities. Event assignments decide where those capabilities apply.

1 EMPLOYEES

7 LIVE PLANS

OPERATIONS EMPLOYEES

Choose a person to configure.

Authenticated Journey manager

LOCAL TEST ROLES

CAPABILITIES AND EVENT ASSIGNMENT

AUTHENTICATED VERIFICATION EVIDENCE

Admin records the agreed vendor payout and fixed fee, then publishes one client amount. The same console turns a broad manager identity into a scoped operations employee.

The delivery portal reshapes the approved plan for live use and keeps internal incidents and decisions separate from external messages.

Operations Dashboard	/manager	Live Operations	/manager/operations
Command Center	/manager/operations/[id]	Event Book	/manager/operations/[id]/print
Event Directory	/manager/weddings	Inquiries	/manager/inquiries
Bookings	/manager/bookings	Messages	/manager/messages
Clients	/manager/clients	Vendors	/manager/vendors
Destinations	/manager/destinations	Settings	/manager/settings

OUTCOME 1

Live pulse

Readiness, urgent work, overdue ownership, and upcoming functions.

OUTCOME 2

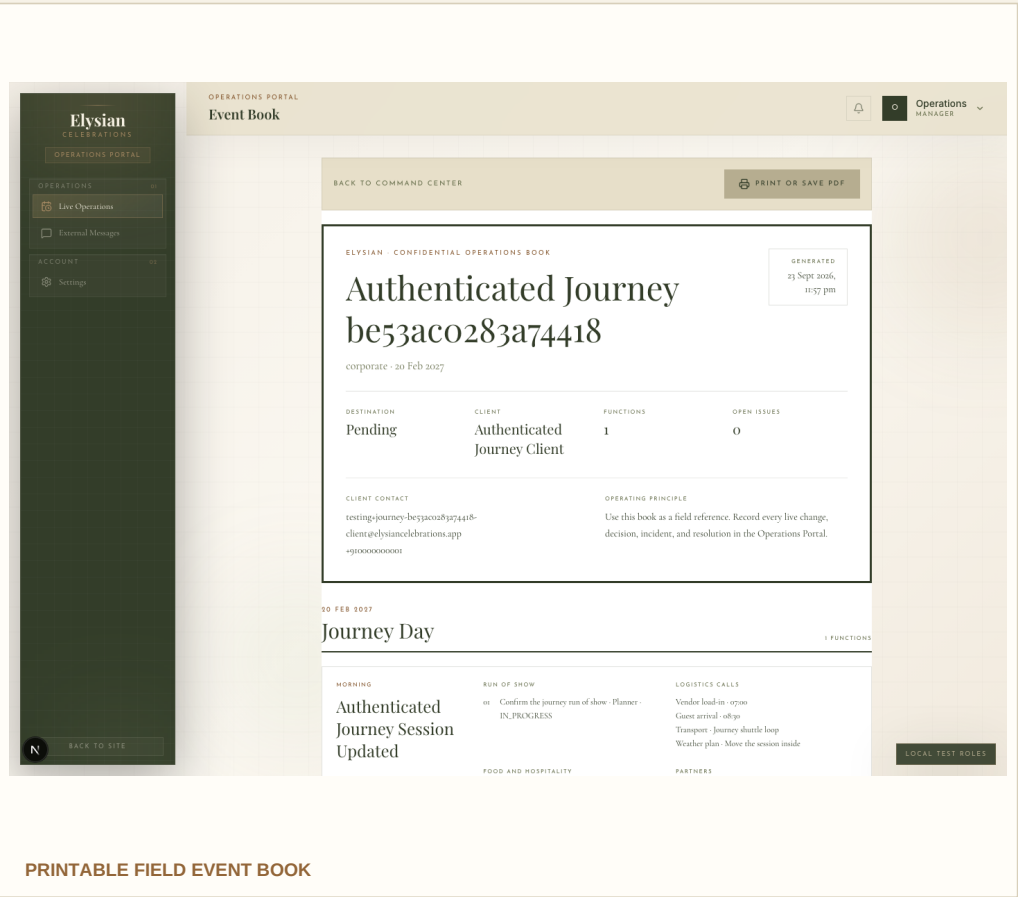

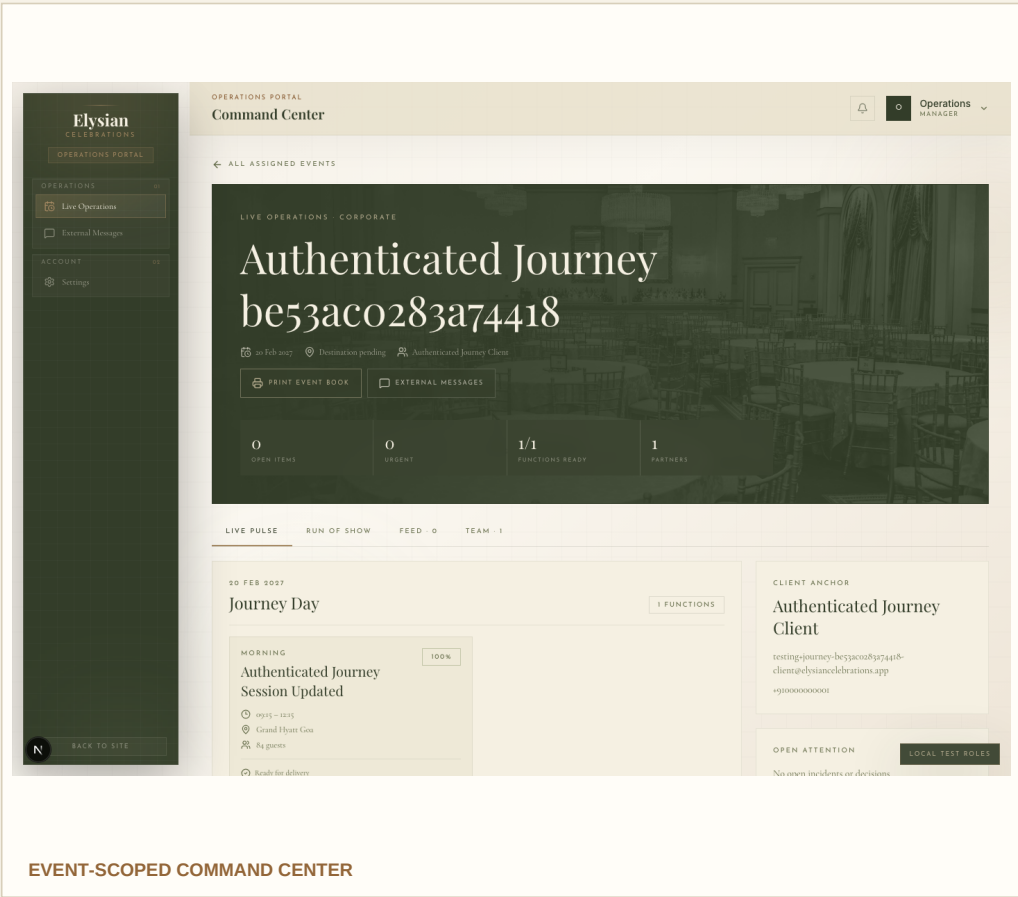

Accountable history

Reporter, owner, due time, acknowledgement, and resolution.

OUTCOME 3

Field resilience

The printable event book uses the same authorized source.

AUTHENTICATED VERIFICATION EVIDENCE

Screen and print use the same permission-aware server read model. Finance appears only when the employee has finance capability.

Vendor amount + fixed fee = final client price

Elysian agrees pricing offline and records the final commercial truth. The platform does not wait for an in-app quotation or negotiation loop.

01

Client

Collection and settlement

GATEWAY OFF BY DESIGN

No API key, environment flag, or local test can charge a client. Provider activation requires legal approval, KYC, webhook secrets, canary transactions, reconciliation, refund testing, and explicit launch approval.

00-01

Position Elysian

Marketing story and the connected lifecycle.

05-10

Compose

Map, vendor services, menu, requirements, tasks, readiness.

12-15

Vendor

Profile, service catalogue, work, calendar, payout.

19-24

Operate

Command center, incident, decision, team, event book.

01-05

Define

Client creates a corporate event, days, functions, venues, needs.

10-12

Coordinate

Cost, guests, run of show, bookings, billing, messages.

15-19

Admin

Progress, pricing, billing, permissions, assignments.

24-25

Close

One event source, role-safe views, full lifecycle.

GATE 01

Static quality

Lint, TypeScript, production build, dependency audit.

GATE 02

Database integrity

Migration parity, dry-run, ownership, RLS, rollback suites.

GATE 03

Authenticated proof

12 groups, role denials, persistence, navigation, cleanup.

Ready to plan, price, coordinate, and operate.

The product is complete without live KYC or payment-provider credentials. Those credentials activate an external rail; they do not define the event platform.

- Multi-format event definition
- Evidence-based cost and fixed final pricing
- Event-scoped team operations
- Printable event field book
- Function-level vendor composition
- Role-safe billing and vendor settlement
- Incident, decision, and escalation history
- Rollback-clean authenticated verification

Detailed handbook: `docs/elysian-dashboard-flow-handbook.md`
